positive grid bias fx crackQ: Generalized eigenvalues for compact operators Let X be a Hilbert space and $T \in \mathcal{L}(X)$ be a compact operator (that is $\|Tx\|$ is finite for all $x \in X$). I am looking for an easy proof (or a reference) of the following: If $\lambda_0, \dots, \lambda_n$ are the eigenvalues of T then $|\lambda_j| \leq \frac{\|T\|}{\|x_j\|}$ where x_j

is a unit eigenvector. I only need a proof for the case $T=0$, for which one can also refer to this question.

A: We may assume $|T| \geq |x_j|$ for every j , because $\lambda_j \geq 0$ for every j and if $T=0$ we have $|x_j|=1$ for every j . Then if

$$x \neq 0 \text{ and } x_j \neq 0, \begin{aligned} & \lambda_j |x_j| = |\langle Tx, x_j \rangle| = |\langle x, Tx_j \rangle| \\ & \leq |x| |Tx_j| \leq \frac{|T|}{|x_j|} |x| \\ & |x_j| \leq |T| |x|, \end{aligned} \text{ hence}$$

$\lambda_j \leq \frac{|T|}{|x_j|} |x|$. Verizon will be using Firefox OS to power its new smartphones

Yes, it looks like Firefox OS is going to be powering

Verizon's upcoming smartphones. Speaking with Phone Arena, Stephen Elop, President and CEO of the company, said that the smartphones will support both GSM and CDMA networks. According to the report, which cites both Stephen Elop and a Verizon official,

the devices will arrive in Q1 2013. They will be given

variable's value in multiple.htaccess files I've got
a.htaccess file that redirects all traffic to index.php.

Then I've got a number of.htaccess files that are
redirecting different pages to different pages. For
example, I have a file called /images.htaccess that

redirects all traffic to /images.php. The file

/images.php handles images and returns the
appropriate mime type based on the file extension.

What I'd like to do is change this value in the original file, so that it changes all those redirects to use that file as well. The way I'd do it for /images.php is by putting this code in the .htaccess file: RewriteCond %{REQUEST_URI} =~ /images.php RewriteCond %{REQUEST_URI} !(.*\.(php|jpeg|jpg|png|gif|pdf|css|js)) RewriteRule.* %{REQUEST_URI}/ [R] Is there a way to do this with multiple .htaccess files? A: You can use the global flag: RewriteCond %{REQUEST_URI} ^/images\.php RewriteCond %{REQUEST_URI} !(.*\.(php|jpeg|jpg|png|gif|pdf|css|js)) RewriteRule.* %{REQUEST_URI}/ [R,L] That said, you should be able to put this into the htaccess file located at the root directory of your site and it will work. This is assuming that /images.php is the last thing in the RewriteRule. Q: Could not load file or assembly '....'. Using IO.File I have a VB.NET 4.0 application which

runs fine in a development environment. However
